

YUVRAJ RAJPUT

Electronics Hardware Technician | PCBA Testing & RCA | RAFAEL-PS20022 certified | ESD & EHS Practices

yuvrajrajput9920@gmail.com | +91-967-114-4973 | Bengaluru, Karnataka

PROFESSIONAL SUMMARY

Diploma-qualified Electronics Technician with 1 year of hands-on experience at Centum Electronics in test equipment handling, PCB functional testing, UV quality operations, and preventive maintenance support. Proficient in ESD-safe handling, EHS/PPE compliance, multimeter usage, basic troubleshooting, and test log documentation. Certified in IPC-A-610H, IPC-A-600, IPC-A-620, ESD, MSD, 5S, EOHS, Kaizen, Thales Specification, and Rafael PS20022 — demonstrating strong grounding in industry quality and safety standards. Eager to support engineers in module/SSD test equipment operations, changeover, installation/removal, and preventive checks in a high-tech production environment. A disciplined, shift-flexible team player committed to maintaining clean, organised, and safe workspaces.

WORK EXPERIENCE

Testing Technician — UV Quality Operations

Centum Electronics | Bengaluru, Karnataka | 2024 – 2025 | 1 Year

- Executed Functional Jig Testing (FCT) independently on defence-grade PCBs and electronic assemblies using dedicated FCT jigs — systematically verifying board functionality against defined pass/fail parameters, signal integrity, and electrical performance criteria to ensure zero-defect output across production batches.
- Performed Manual Testing of PCBs and electronic modules using digital multimeters and oscilloscopes — conducting point-to-point continuity checks, voltage measurements, and signal verification to confirm full assembly integrity and electrical correctness prior to dispatch.
- Conducted UV Quality Inspection using ultraviolet lamps on assembled boards to detect surface-level anomalies including solder voids, conformal coating gaps, contamination, flux residue, and mechanical damage — ensuring zero non-conforming units progressed to the next production stage.
- Performed multi-stage Line Quality Inspection as an inline quality gatekeeper — verifying PCBs at each production stage for Soldering Quality (wetting, bridging, cold joints, solder balls), Component Quality (correct placement, polarity, orientation, damage), and IC Quality (pin alignment, seating, leg condition) in strict accordance with IPC-A-610H workmanship standards and Thales Specification documentation.
- Interpreted and applied Thales technical documentation, customer-specific work instructions, and IPC-A-610H acceptance criteria during every inspection cycle — making accurate accept/reject decisions against drawing requirements, BOM, and specification-defined tolerances for defence-grade electronic assemblies.
- Identified, tagged, and quarantined non-conforming boards across all quality checkpoints; raised detailed Non-Conformance Reports (NCRs) with defect classification, root cause observations, and photographic evidence — enabling engineers to drive prompt corrective and preventive actions and reduce recurrence.
- Maintained comprehensive FCT results, manual test records, UV inspection logs, and line quality reports in strict compliance with IPC-A-610H traceability requirements and Thales documentation standards — ensuring full audit readiness, complete production traceability, and accountability at every build stage.
- Adhered strictly to ESD-safe handling procedures (certified: ESD, MSD), PPE requirements, EOHS safety standards, and IPC-A-610H handling guidelines throughout all testing and inspection activities; actively contributed to 5S housekeeping and Kaizen continuous improvement initiatives, helping maintain a disciplined, clean, and safe production environment.

TECHNICAL SKILLS

Hardware Testing & Debugging: PCB Functional Testing (FCT), Module/SSD Equipment Checks (power, connectivity, alarms, interlocks), Visual Inspection, UV Quality Operations, Hardware Validation, Root Cause Analysis (RCA), Basic Troubleshooting & Escalation, Corrective Action Tracking

Test Equipment: Digital Multimeter (continuity, voltage, current), Oscilloscope, UV Inspection Lamps, FCT Test Jig, Hand Tools, Cable & Connector Handling, Selective Soldering Machine

Electronics Fundamentals: Electrical/Electronic Fundamentals (Voltage, Current, Continuity, Grounding), Analog & Digital Circuits, Schematic Reading, Electronic Components (Resistors, Capacitors, Diodes, Transistors, ICs, Connectors), Basic Automation/Handler/Tester Awareness

Manufacturing & Assembly: SMT, PTH, Module Installation/Removal, Cable & Connector Handling, Rework Operations, RoHS & Non-RoHS Assembly, BOM Verification, Equipment Changeover & Validation Support

Quality Standards: IPC-A-610H, IPC-A-600, IPC-A-620, Thales Specification, Rafael PS20022, ESD/MSD Safe Handling, Cleanroom Practices, 5S Housekeeping, Kaizen Continuous Improvement, EOHS/PPE Compliance, Outgoing Quality Inspection

Documentation: Test Logs & Checklists, Quality Reports, Production Records, Non-Conformance Reports (NCR), Spare Parts Tracking & Labeling, MES/Log Sheet Entry

Tools & Software: MS Office, MS Excel, Log Sheets, MES Tools (basic)

Languages: Hindi (Native), English (C1 — Professional Working Proficiency)

EDUCATION

Diploma — Computer Science Engineering

Seth Jai Parkash Polytechnic, Damla, Haryana | 2022 – 2025 | CGPA: 6.8 / 10

B.Tech — Information Technology (Pursuing)

Maharshi Dayanand University (MDU), Rohtak, Haryana | 2026 – Present

KEY STRENGTHS

- Hands-on experience with test equipment handling, power/connectivity checks, and equipment changeover support — directly aligned with this role's day-to-day responsibilities.
- Flexible and shift-ready — accustomed to rotational shift environments and urgent operational support in a fast-paced manufacturing setting.
- Quick learner — adapted to UV quality operations and testing workflows within the first month.
- Effective communicator and team collaborator — experienced in coordinating with engineers, QA teams, and production for defect reporting, part movement, and inventory tracking.
- Quick learner with a willingness to follow equipment procedures, checklists, and engineer guidance — committed to growing in a high-tech electronics/equipment testing environment.

CERTIFICATIONS & TRAINING

Certified and trained in the following industry standards and quality management programmes at Centum Electronics:

- **ESD (Electrostatic Discharge)** — Safe handling and control of electrostatic discharge in electronics manufacturing environments.
- **MSD (Moisture Sensitive Devices)** — Proper storage, handling, and exposure management of moisture-sensitive electronic components.
- **5S Workplace Organisation** — Sort, Set in order, Shine, Standardise, Sustain — lean workplace methodology for operational efficiency.
- **EOHS (Environmental, Occupational Health & Safety)** — Compliance with environmental, health, and safety regulations in manufacturing operations.
- **IPC-A-610H** — Acceptability of Electronic Assemblies; global standard for PCB and electronic assembly inspection.
- **IPC-A-600** — Acceptability of Printed Boards; inspection criteria for bare PCB quality and workmanship.
- **IPC-A-620** — Requirements and Acceptance for Cable and Wire Harness Assemblies.

- **Thales Specification** — Trained in Thales defence and aerospace manufacturing specifications for quality and process compliance.
- **PS20022 — Rafael Certification** — Certified to Rafael Advanced Defense Systems' PS20022 standard for assembly and inspection processes.
- **Kaizen (Continuous Improvement)** — Trained in Kaizen lean methodology for ongoing process improvement and waste reduction in production.

DECLARATION

I hereby declare that all the information provided in this resume is true and correct to the best of my knowledge and belief.
