

YUVRAJ RAJPUT

Electronics Hardware Technician | PCBA Testing & RCA | Data Analytics SME | Python Developer
Excel | SQL | Power BI | Python | RAFAEL-PS20022 Certified | ESD & EHS Practices
yuvrajrajput9920@gmail.com | +91-967-114-4973 | Bengaluru, Karnataka | GitHub: github.com/yuvibuildsaio01

PROFESSIONAL SUMMARY

Electronics Hardware Technician with hands-on experience in PCB functional testing, root cause analysis, and UV quality inspection for defence-grade assemblies at Centum Electronics, certified in IPC-A-610H, Thales Specification, and Rafael PS20022. Alongside full-time work, independently built Data Analytics and Python development skills — earning 5 industry-recognised certifications (Deloitte, IBM, Coursera, Udemy) and completing 3 real-world projects in Excel, SQL, Power BI, and Python. Comfortable documenting processes, writing structured guides, and simplifying technical workflows. A disciplined, self-driven learner with strong time management, clear communication, and a track record of applying new skills to practical, real-world problems.

WORK EXPERIENCE

Testing Technician — Centum Electronics

Bengaluru, Karnataka | June 2025 – 2026

Phase 1: Testing

- Performed Functional Jig Testing (FCT) independently on defence-grade PCBs and electronic assemblies, verifying board functionality against pass/fail parameters, signal integrity, and electrical performance.
- Conducted manual testing using digital multimeters and oscilloscopes — continuity checks, voltage measurements, and signal verification prior to dispatch.
- Maintained FCT results and manual test records in compliance with IPC-A-610H traceability requirements, ensuring audit readiness.

Phase 2: Debugging & Root Cause Analysis

- Interpreted Thales technical documentation and IPC-A-610H acceptance criteria to make accurate accept/reject decisions against BOM and drawing requirements.
- Identified and quarantined non-conforming boards; raised detailed Non-Conformance Reports (NCRs) with root cause observations and photographic evidence.
- Supported troubleshooting and escalation of hardware faults, contributing to corrective action tracking and recurrence reduction.

Phase 3: QC / UV Quality Inspection

- Conducted UV quality inspection using ultraviolet lamps to detect solder voids, coating gaps, contamination, and mechanical damage — ensuring zero-defect output.
- Performed multi-stage line quality inspection covering soldering, component, and IC quality per IPC-A-610H workmanship standards.
- Adhered to ESD-safe handling, PPE, and EOHS standards; contributed to 5S housekeeping and Kaizen continuous improvement initiatives.

DATA ANALYTICS & PROGRAMMING SKILLS

Note: These skills were self-prepared outside working hours (evenings/weekends), alongside a full-time technician role — reflecting strong time management and self-driven learning.

Excel: Pivot Tables, VLOOKUP/XLOOKUP, Power Query, Data Cleaning, Dashboard & Report Building

SQL: Data Extraction, Joins, Queries for Reporting & Analysis

Power BI: KPI Dashboards, Data Visualisation, Automated Reporting

Python: Scripting & Automation, Pandas, NumPy, Scikit-learn (basics), Input Validation & Logic Design

RELEVANT DATA ANALYTICS PROJECTS

End-to-End ETL & Power BI Dashboard Project

Python, SQL, Excel, Power BI, ETL Pipeline | github.com/yuvibuildsaio01

- Designed and documented a complete ETL workflow — ingestion, cleaning, transformation, and visualisation — structured step by step.
- Built KPI dashboards and automated reports in Power BI and Excel.
- Wrote and documented SQL queries for extraction alongside Pandas-based data transformation.

AI-Powered Assistant with API Integration

Node.js, Google Gmail API, Google Calendar API | Academic Project 2024–2025 | github.com/yuvibuildsaio01

- Built and documented a multi-feature system integrating two external APIs with a clearly explained architecture.

CLI-Based Logic & Validation Tool

- Designed a rule-based Python application demonstrating structured use of conditionals, loops, and input validation.

HARDWARE & QUALITY SKILLS

Testing & QC: FCT, Manual Testing, UV Inspection, Line Quality Inspection, RCA, Visual Inspection

Test Equipment: Digital Multimeter, Oscilloscope, UV Inspection Lamps, FCT Test Jig, Selective Soldering Machine

Manufacturing & Assembly: SMT, PTH, Module Installation/Removal, Cable & Connector Handling, Rework Operations, BOM Verification

Quality Standards: IPC-A-610H, IPC-A-600, IPC-A-620, Thales Specification, Rafael PS20022, ESD/MSD, 5S, EOHS

Documentation: Test Logs, Quality Reports, NCRs, MES/Log Sheet Entry, Process Documentation, Step-by-Step Guides

Software: MS Office (Excel, Word, PowerPoint), MES Tools

Soft Skills: Team Collaboration, Communication, Time Management, Problem Solving, Adaptability, Self-Directed Learning

Languages: Hindi (Native), English (C1 — Professional Working Proficiency)

CERTIFICATIONS & TRAINING

Electronics & Quality (Centum Electronics): ESD & MSD Handling | 5S Workplace Organisation | EOHS | IPC-A-610H | IPC-A-600 | IPC-A-620 | Thales Specification | Rafael PS20022 | Kaizen (Continuous Improvement)

Data Analytics & Programming (Self-Prepared): Data Analytics Virtual Internship — Deloitte Australia (2026) | 100 Days of Code: The Complete Python Bootcamp — Udemy (2026) | SQL and Database Management — Coursera (2025) | Data Science and Analytics — IBM SkillsBuild (2025) | Machine Learning with Python — Krish Naik Academy (2026)

EDUCATION

Diploma — Computer Engineering

Seth Jai Parkash Polytechnic, Damla, Haryana | 2022 – 2025 (Completed) | CGPA: 6.8/10

10th Standard (Secondary School)

CGPA: 8.4/10

KEY ACHIEVEMENTS

- Completed 5 industry-recognised certifications in Data Analytics, Python, SQL, and Machine Learning within 12 months — entirely self-taught while working full-time.
- Built 3 documented, real-world data projects independently, each structured clearly enough to double as learning material or case studies.
- Maintains an organised, well-documented GitHub portfolio demonstrating consistent effort outside regular working hours.
